

LinkedIn Github Medium	JUNAID N Z	+91-7893446010 junaidnz97@gmail.com
Senior Software Engineer	LinkedIn	February 2025 - Present
- Led and implemented the integration of LinkedIn Talent Insights into LinkedIn Hiring Assistant — an agentic AI system for recruiters — by architecting and building a dedicated insights subagent.. - Designed and integrated Liha Metrics into Axia (a platform that tells how much linkedin products help in closing hiring requirements) Tech Stack: Java, Python, Spark, Langchain		
Senior Software Engineer	Forma	November 2023 - February 2025
- Designed and implemented the migration of the Authentication Service from an in-house system to WorkOS, integrating SSO connections and username-passwords for 500k+ users, ensuring enhanced compliance and security. - Worked on Geo-Sharding of MongoDB Atlas collections project and wrote the SOP document to shard collections. - Designed and implemented a generic multi-factor authentication system used by multiple products. - Designed refactor of Claims Service from a monolith to a new microservice. - Improved observability of services by publishing metrics to data-dog and building dashboards for the same. Tech Stack: Node.js, GCP, MongoDB, Kubernetes		
Software Engineer II	Epifi	October 2022 - November 2023
- Designed real-time streaming of stock prices from backend to users in a fan-out fashion using grpc streams for US-Stocks. - Designed and built 2 factor authentication for Mutual Fund purchases and SIP registrations via both email and SMS. - Collaborated with project managers, senior engineers and other stakeholders to plan out tasks and features. - Integrated the catalog data of US-Stocks with zinc-search to provide fuzzy search capabilities. - Designed and built a reconciliation system for mutual-funds to detect and correct out of sync data with vendors. - Designed and implemented investment aggregator service using a plugin architecture and integrated multiple investment instruments to it. - Designed and Led data fetch from third party vendors for mutual-fund analyzer project and integrated with secure apis protected by encryption keys. - Mentored interns on various projects and evaluated their work during the internship tenure. Tech Stack: Go, GRPC, Redis, CockroachDB, AWS		
Software Engineer I	Epifi	August 2021 - September 2022
- As the second engineer on the Mutual Funds team, I designed and built the system from the ground up, integrated it with third-party vendors (CAMS and Karvy), implemented idempotent and retrievable buy/sell workflows, and designed database schemas in CockroachDB handling 10k+ orders a day. - Developed a facade payment handler for mutual funds to prevent double payment issues during integration with the internal payment service. - Designed a concurrent-safe file generator that ensures no mutual-fund order is duplicated across files, even if the same order appears in multiple batches. - Worked on a number of KTLO projects including refactoring existing code to follow design patterns. Tech Stack: Go, GRPC, Redis, CockroachDB, AWS		
SDE	AMAZON	August 2020- August 2021
- Worked on Implementing Re-KYC Project that enables customers for whom issues were found during audits to re-onboard and do their KYC again. - Designed and implemented a risk detection system integrated into Amazon's retail checkout pipeline, successfully identifying and canceling fraudulent orders while efficiently handling the entire retail traffic for India. Tech stack: Java, DynamoDB, AWS		
Student Developer	Google Summer Of Code 2019	May 2019 – August 2019
- Developed Open Source Software for Global Alliance For Genomics and Health. - Developed REST APIs for searching genetic data using Spring Boot and MongoDB (More Details) Tech stack: Java, MongoDB, SpringBoot		
EDUCATION		
B-Tech in Computer Science (CGPA : 8.08/10)	Indian Institute Of Information Technology, Sri City	August 2016 – May 2020
